

Car Rental Booking Project

Developed By :

Sneha	Backend entities management and database management.
Tharun	Support to Both Frontend and Backend . Handled 80% backend and 40% frontend, i.e, handling HTTP requests
Mohan	Frontend part, mainly contributed to Header, Footer, Heroslider parts.
Anil	Frontend part designing and data handling.

Submitted to :

Sarfaraz Sir (ExcelR Institute)

Overview :-

The primary goal of this project is to offer a user-friendly, efficient, and secure platform to rent a car.

Users can able to book cars from various cities listed on the platform. A user can choose a car by reviewing its specifications listed in the "Cars" section.

Functionalities / Features :-

- Providing search functionality of the cars based on the city selected.
- Managing the information of the cars according to the City.
- Monitoring the bookings done.
- Providing all the Testimonials of previous users, to get a point of view.
- A Form is available, where the user can able to provide his valuable feedback.
- 24/7 contact service.

Diving into Project

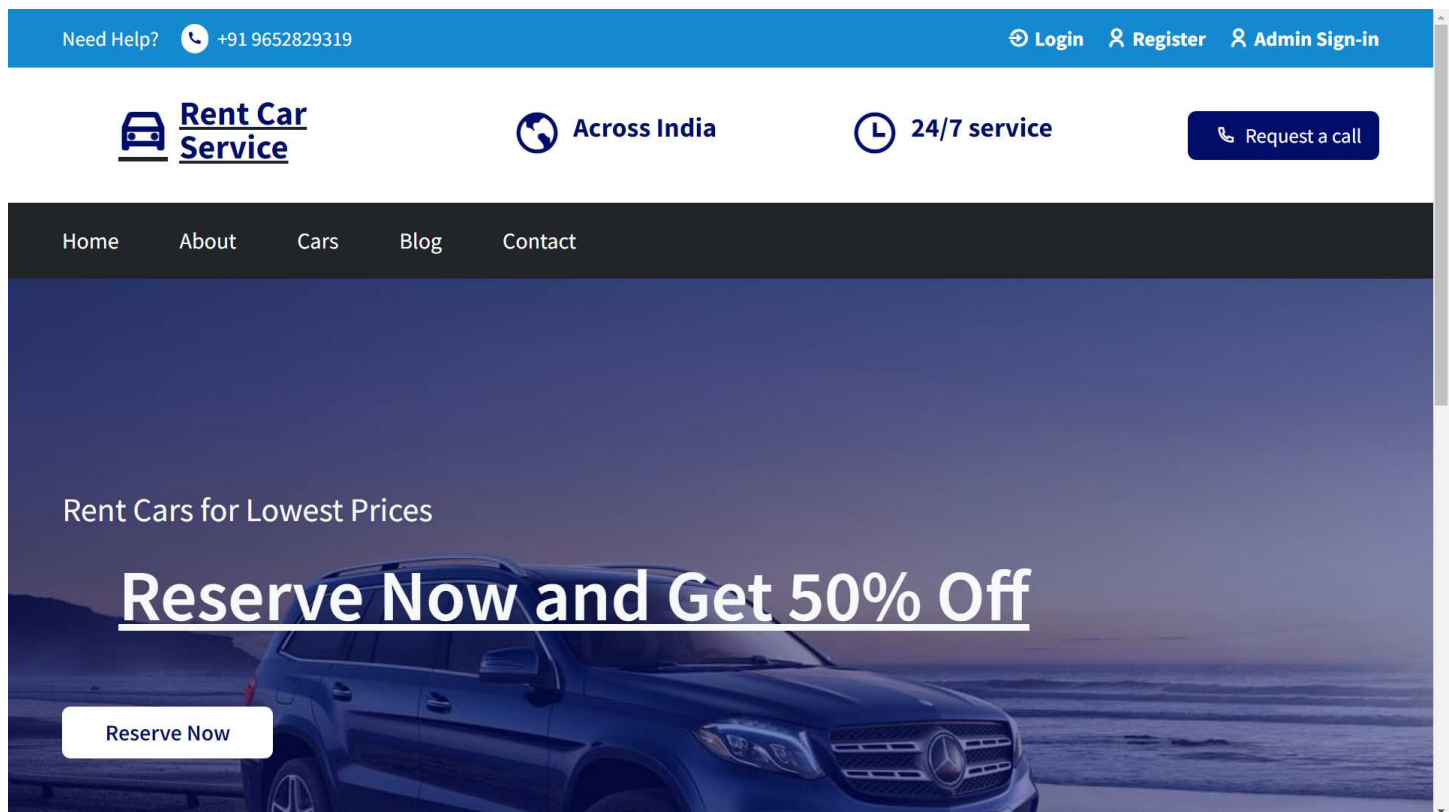

Introduction :-

A User can visit our website to book a car for self-ride by providing details of the ride, which were asked there.

providing the impressive UI, a user can enjoy in the process of booking the car.

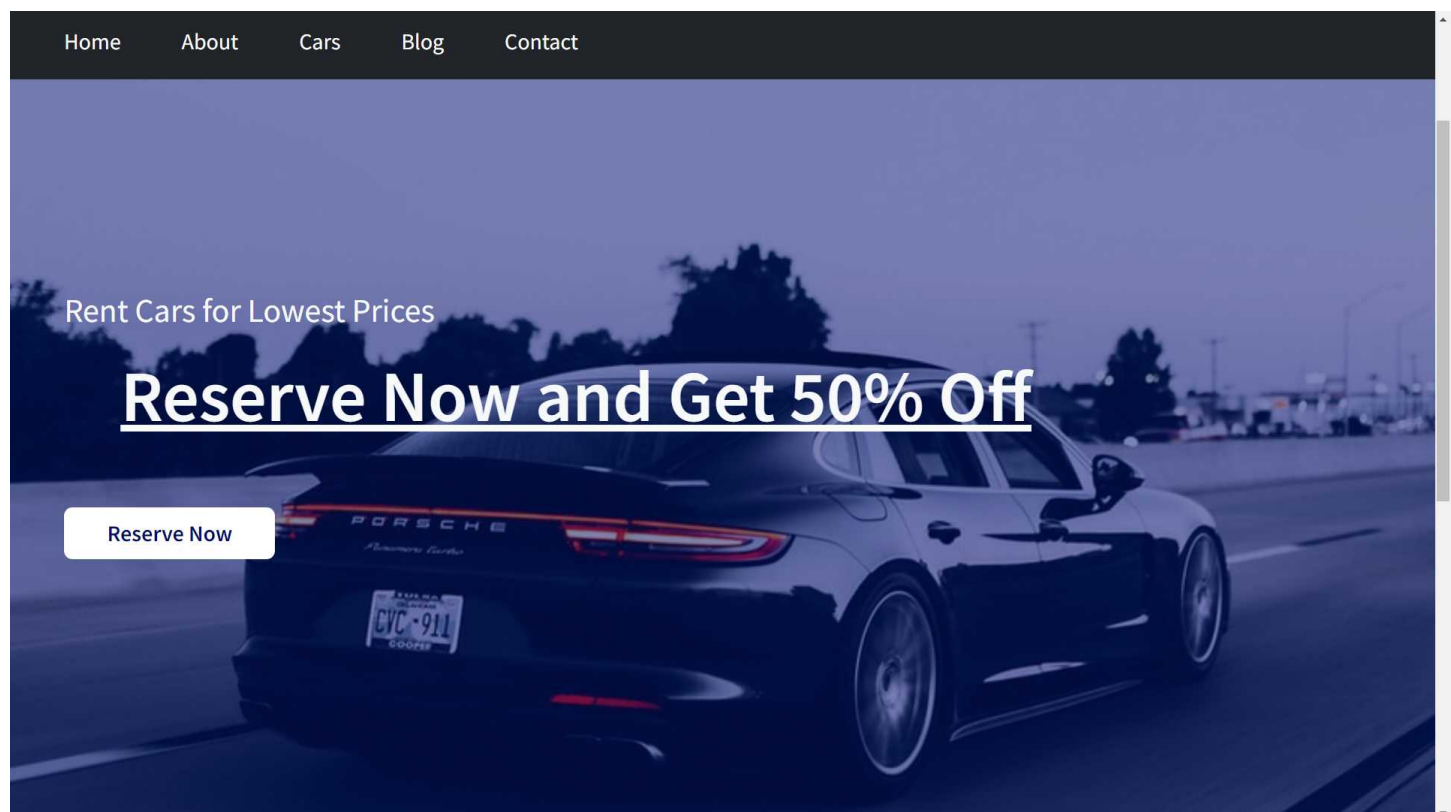

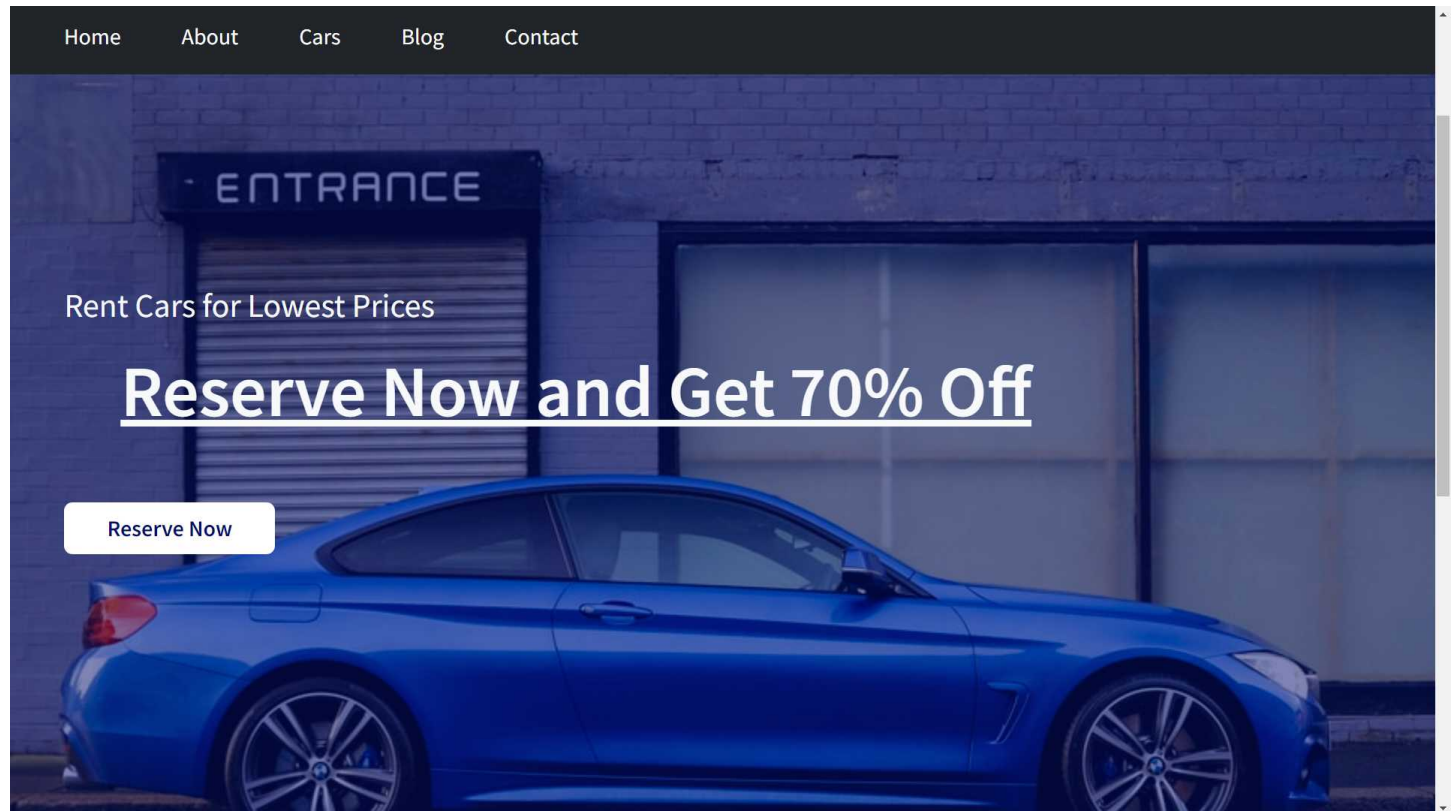

By successfully entering our website, A user can able to watch the Eye-feasting “ **Home** ” page, as below

Home Section

Header Part includes Contact number of our office, Location where we present, time in which we available, and 3 buttons to perform further actions.

Just below that, mesmerizing animated **hero slider**

Mohan
Customer

The above are the **Testimonials** given by other users.

To Book a car the User should enter the fields visible there. If the user clicks on “ My Bookings ” button without any previous booking, then can see an alert message as shown below.

For Booking the Car, the user should select the “ **City** ” displayed in the list, “ **From Date** ”, and “ **To Date** ” as below and click on “ Search ” Button.

A screenshot of a web browser showing a car rental search interface. The browser's address bar displays 'localhost:3000/search'. The page features a header image of a car's rear. Below this, the text 'Select Your City' is followed by a text input field containing 'Pune'. Underneath, there are two date selection fields: '18-05-2024' and '21-05-2024', each with a calendar icon. A green 'Search' button is positioned below the dates. At the bottom left, there is a dark grey button labeled 'My Bookings'. On the right side of the page, a silver car is shown in profile. The browser's tab bar at the top includes 'Excelr', 'Spring Boot', 'Resume', and 'Javascript', along with a bookmarks bar showing 'All Bookmarks'.

In the next page, the user can able to see the details, which he selected while searching and below that, List of all the cars available in that particular city, which the user selected while searching.

Book Car

The user is shown **company, model, color, year, Rent per Day** details of the car to ease the selection of the car.

Selected details :

Selected City : Pune

Selected From Date : 2024-05-18

Selected To Date : 2024-05-21

Visit [Cars](#) link above for Images

Available cars in Pune:

Car Id : 21

Company: Maruti

Model: Baleno

Car Id : 24

Company: Tata

Model: Safari

Available cars in Pune:

Car Id : 21

Company: Maruti

Model: Baleno

Year: 2019

Rent Per Day: Rs.1500

Color: Grey

Book

Car Id : 24

Company: Tata

Model: Safari

Year: 2019

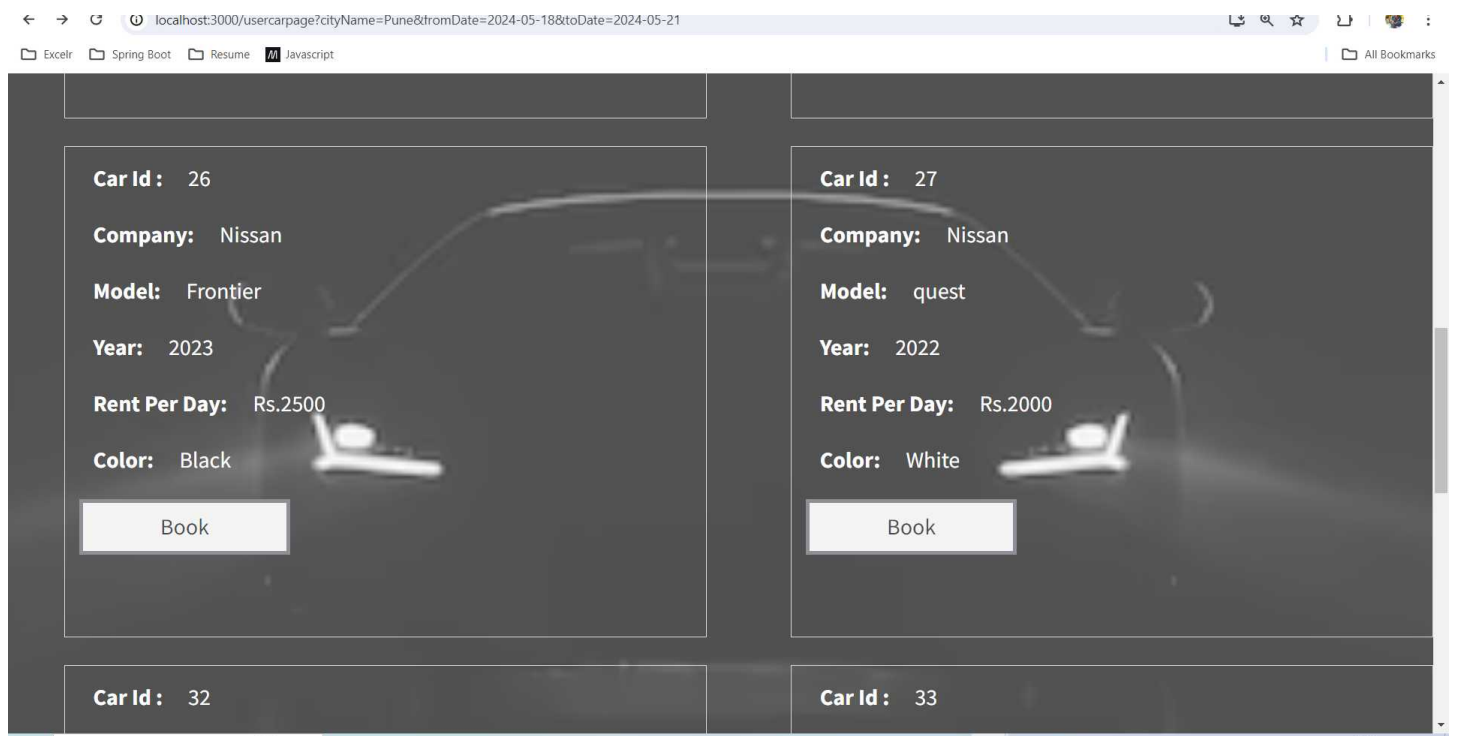

Rent Per Day: Rs.2000

Color: Black

Book

Car Id : 26

Car Id : 27

Now the user can able to book the car, whichever is perfectly matches to their requirements like car seating, price and additional details like Mileage, Fuel used which are available in “**Cars**” section.

Once the user selects the car and clicks on “**Book**” button of that respective car, then redirect to **confirm details page** like below.

Note :- The user can able to proceed to next step, **if** the car is **available** at that particular dates.

Booking Details

Email

Once reviewing all the details of the ride, which was selected previously. If the user thinks everything is fine then click on the “**Book Car**” button shown below to book the car for that particular date in a city.

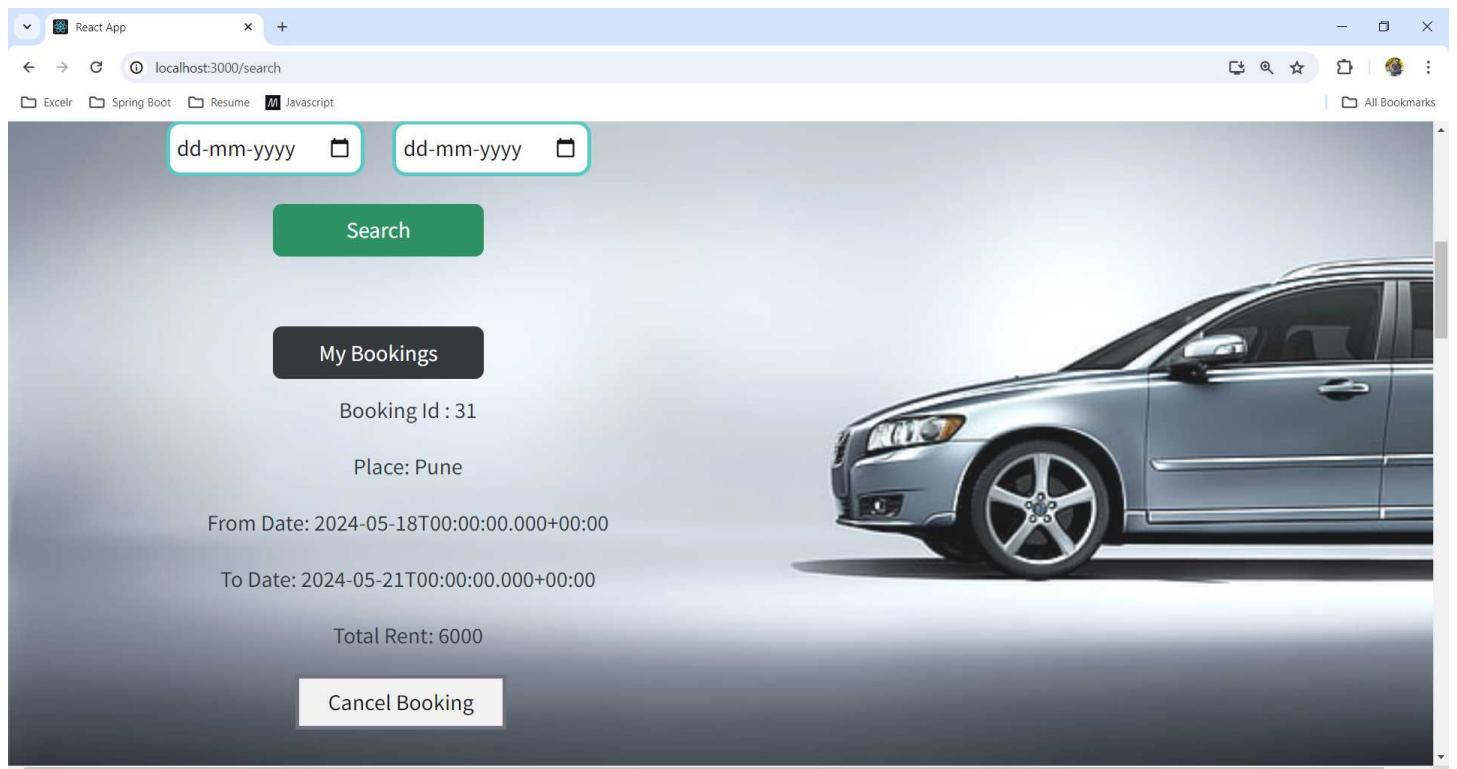

After succesful booking, user can able to see an alert message saying, “ **Booking Succesful, check email for details** ”.

As said, if opens gmail, then the user will receive the mail in which mentioning all the booking details like below.

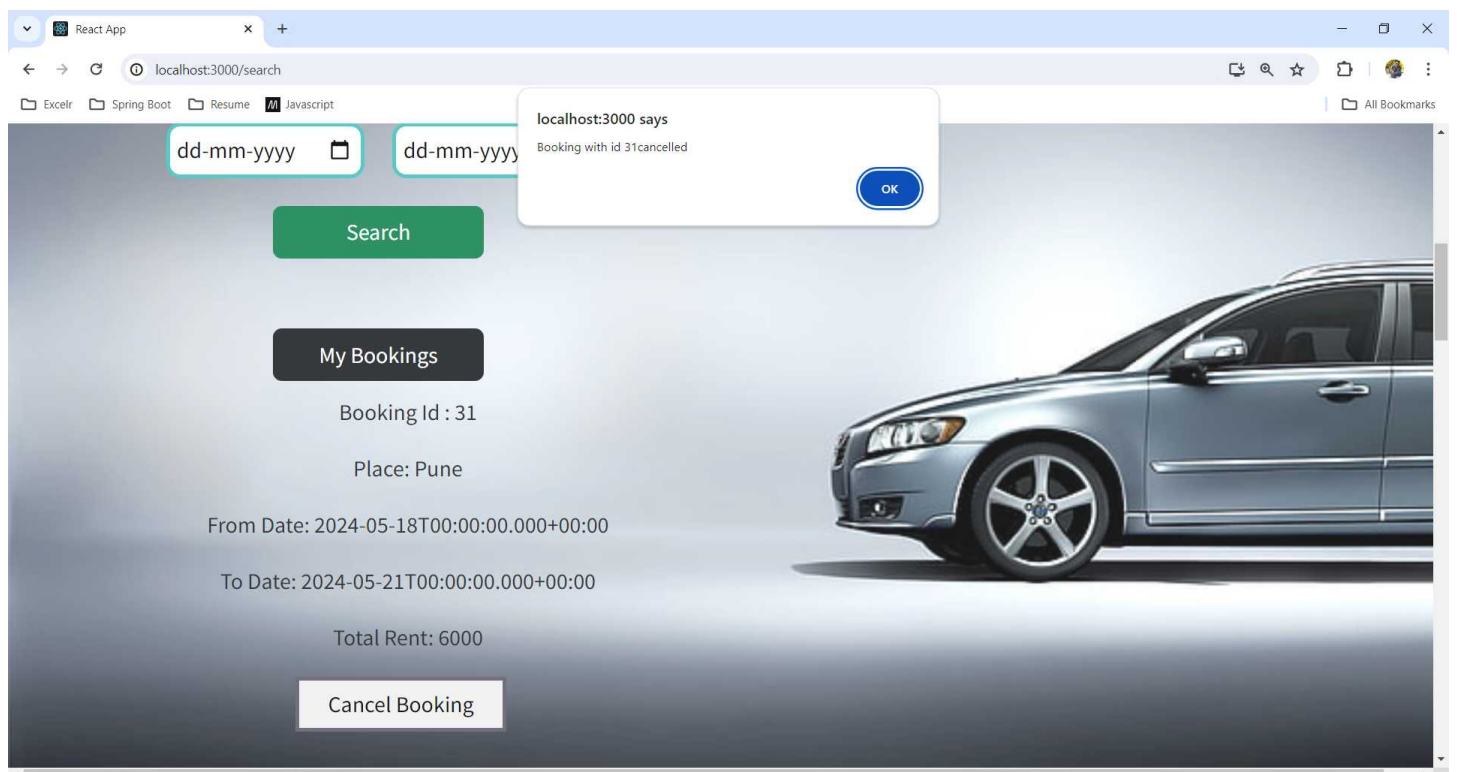

After succesful booking, the user is redirected to the Landing page, now the user can able to **see the booking** done by clicking “Click ” buton below “ See all the cars ” button.

If the bookings present for the user, then can bee seen all the bookings with all the details of that booking

The user is given an additional feature. where user can “**Cancel the Booking**” of previous booking by clicking the “**Cancel Booking**” button.

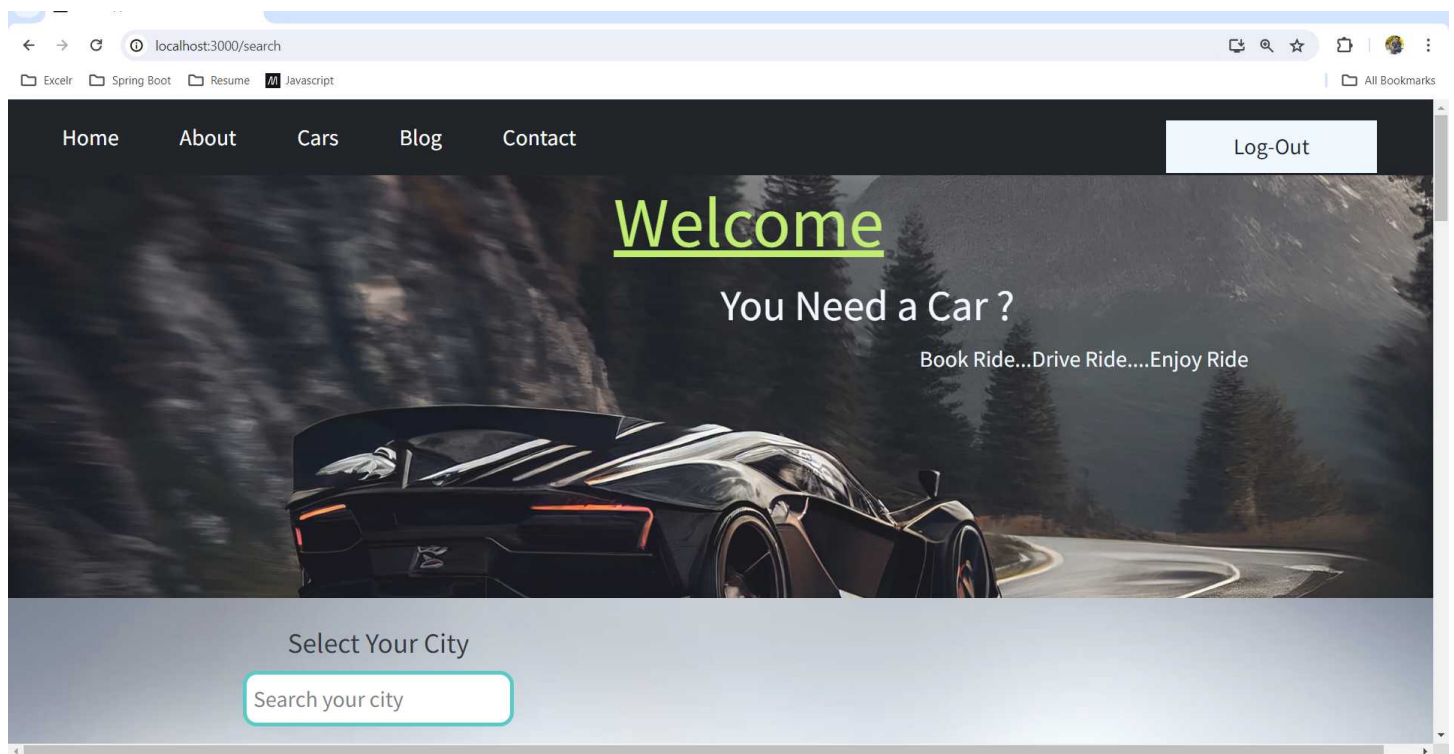

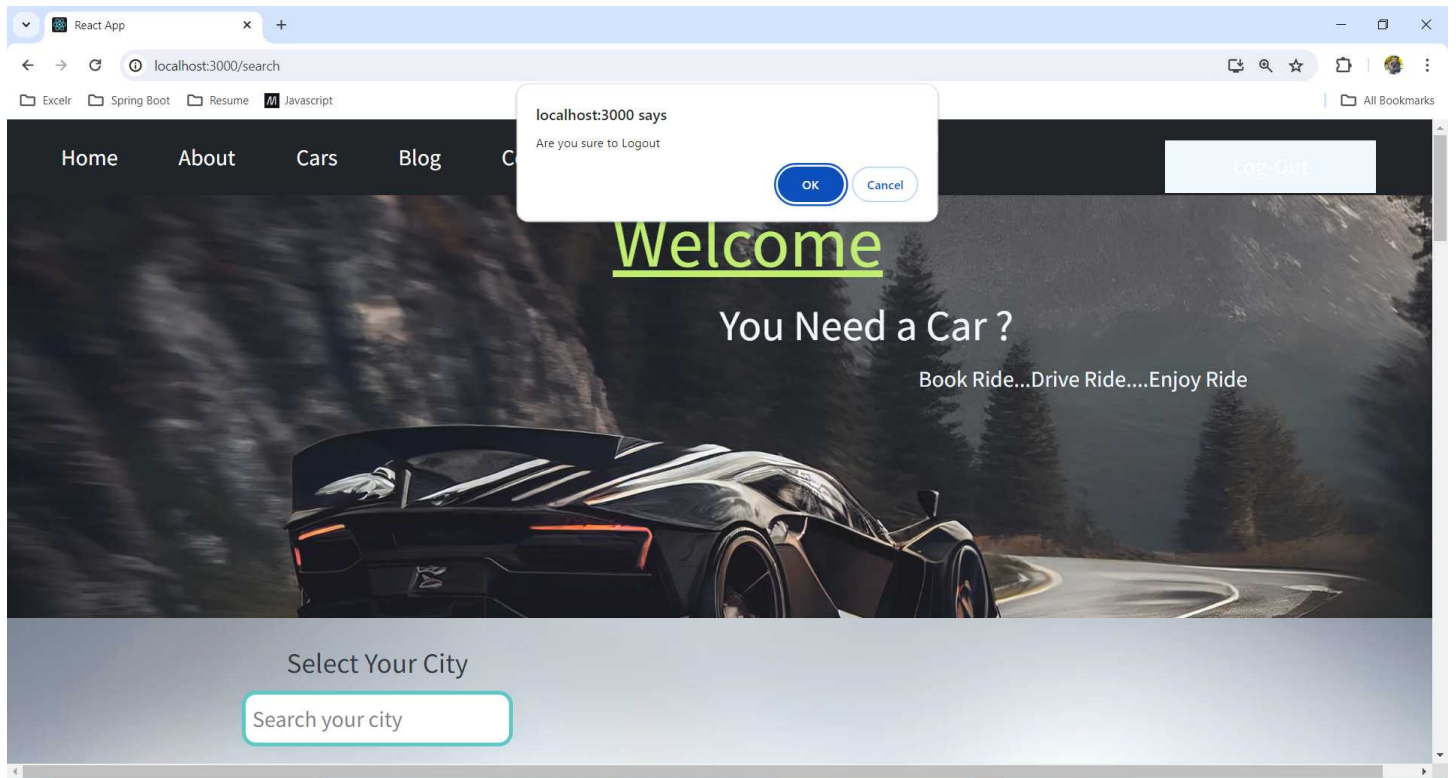

when clicking on the Cancel Booking button, then that respective booking gets canceled and shown in an alert message saying, “Booking with id {number} gets canceled (if there are any other bookings, they will be shown) and the page gets reloaded.

Sign out

After completion of booking, the user will be getting all the booking information to his/her respective email provided while registration.

Now if the user want's **exit the profile** from website, then click on “ **Sign out** ” button at Top-right corner.

once the user clicks on the “ Log-Out ” button then an alert message appears, asking for confirmation to logout. If click “ yes ”, then the account exists from the website, or else will be on the same page.

The Conclusion

In this manner, a user can enjoy the booking and also ride with our amazing services. The car rental web application successfully meets the objectives set out at the beginning of the project.

This application provides a seamless experience for renting cars, with a robust Backend and a Responsive Frontend.

Technologies, Tools specification : -

Frontend	javaScript, React.js, CSS
Backend	Java, SpringBoot, JDBC
Database	MySQL (RDBMS)
Tools	vs Code, IntelliJ, Chrome
